

# Grodan Cress

Product data sheet

Grodan Cress NG2.0 is a stonewool growing media for microgreens and baby leaf crops, available in slabs and plates.

## Key benefits

- Thinnest Grodan product available
- Consistent structure results in quick and easy germination
- NG2.0 technology ensures good uniform water distribution and resaturation, resulting in even and improved crop growth

## NG2.0 Technology

NG2.0 is the successor of the Next Generation Technology and adds new benefits to the existing advantages. Water distribution is even more uniform and the crop utilises the total substrate volume better. Continual new growth of roots results in a healthier and more vigorous crop throughout the whole growing season. These benefits translate into higher yields, improved quality and reduce the sensitivity of the crop to diseases.
