

Grodan Pro Plug

Product data sheet

The Grodan Pro plug is based on the Vision technology. The plug ensures high plant uniformity and better plant quality. The firm structure of the plug ensures higher stability,

optimal firmness and therefore greater ease of handling in automated processes. The perfect finishing enables the plugs to be handled with ultimate precision.

Grodan Pro Plug

Grodan Pro is an innovative and optimally controllable propagation plug, ideally suited for tomato or cucumber plants.

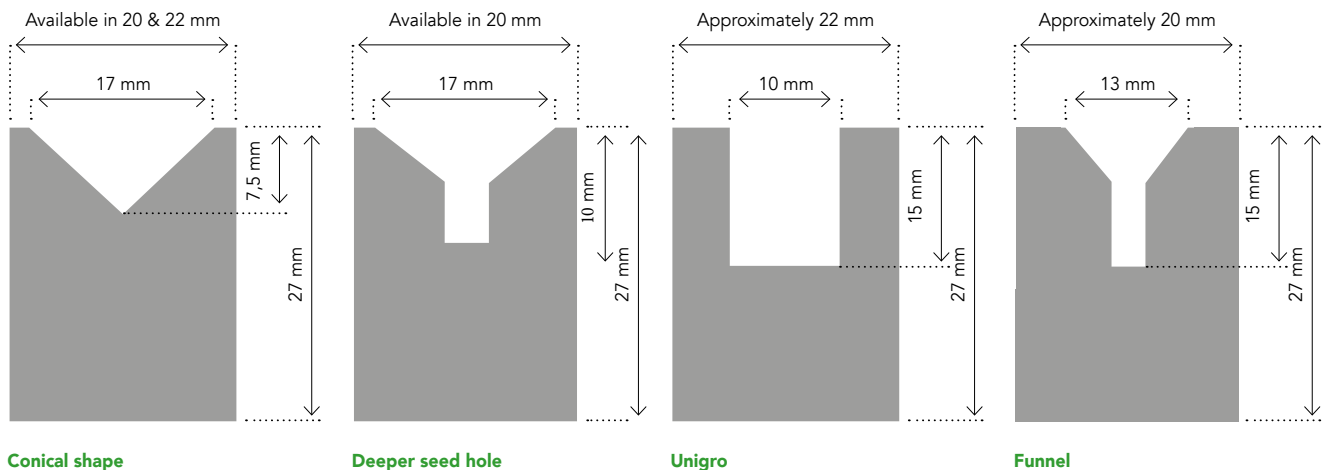

Application

Thanks to its Vision technology, the Pro blocks have uniform WC and EC distribution. This ensures undisturbed development and complete control of plant growth in all growing conditions.

Vision Technology

Vision technology is characterised by its brown colour. New raw materials were used in the production process, resulting in higher reliability and firmness. In addition, this technology offers an optimal water and air balance, which leads to better distribution of water and nutrients throughout the substrate.

Seed hole diagrams

Key benefits

- Perfect finishing for highest usable transplants
- Foundation for Precision Growing
- Optimal firmness
